

## **Request for Panelists**

*Company Name:* Roadbind America, Inc.

*Product Name:* Tembind Dust Control/Road Stabilization Agent

### **Product Description**

Tembind is a road stabilization agent made from lignosulfates, a byproduct of papermaking.

### **Product Use**

Tembind has been used to stabilize dirt roads in national parks, as well as airstrips, helicopter pads, and unpaved parking lots. Use of Tembind has been shown to improve road performance while decreasing washout of sediment in stormwater runoff. Lab tests have shown the product to be nontoxic and biodegradable. The use of Tembind to stabilize unpaved roads costs about one-tenth of traditional paving.

### **Evaluation Status**

EvTEC is seeking panelists for a joint HITEC/EvTEC evaluation of Tembind. If you have expertise in stormwater runoff management, environmental impacts of road maintenance, or roadway performance, please contact Deb Snoonian by telephone at 202.842.0555 or by e-mail at [dsnoonian@cerf.org](mailto:dsnoonian@cerf.org). It is anticipated that the first panel meeting will be held in January or February.

### **Applicant Contact**
